

# Portfolio Project

By Naomi George

## Project Description:

It is a project-based Internship task given by Stige foundation.

A Weather Forecasting backend Site incorporating JavaScript as the major language. As the name suggests it tells the temperature and weather type in an area.

## Approach:

After going through all the requirements necessary for the process started by creating a basic design of the site. The site is majorly JavaScript based to get the weather conditions implicitly extracting the conditions from other site and changing everything as required.

## Tech-Stack Used:

This backend project was created using HTML, CSS, Javascript Express.js (majorly).
